

Dadi speciali

Special Nuts

I dadi speciali LLS racing sono ricavati dal pieno da barre in Al 7075 T6 (ERGAL) o da barre in Ti5 (Titanio).

Le caratteristiche costruttive del componente in Ergal garantiscono un risparmio di peso di tre volte inferiore e un'estetica avvincente grazie alla vasta gamma di colori disponibili.

I dadi speciali in titanio offrono una resistenza più che doppia di un comune acciaio ed un considerevole risparmio di peso.

Applicare le coppie di serraggio riportate sul libretto di manutenzione del componente originale. Si consiglia di usare chiavi esagonali chiuse con l'accortezza di interporre un panno per preservare adeguatamente l'anodizzazione.

LLS Racing special nuts are drawn from full bars of Al 7075 (Ergal) or Ti6Al4V (Titanium grade 5).

Constructive features of Ergal components assure a three time lower weight and an attractive aesthetic, thanks to the wide colour range availability.

Special titanium nuts give more than double resistance than a common steel and an appreciable weight saving.

Apply the tightening torques you find in the maintenance log of the original component. Allen wrench closed are recommended with the foresight to interpose a cloth to save anodization adequately.
